

**Keep stimulus funds flowing for
your water treatment project.**

Buy American. Buy Emerson.

Tapping into the American Recovery and Reinvestment Act (ARRA) of 2009? Then don't jeopardize your funding for the complete project by faulting on the "Buy American" requirement for one component. The ARRA Buy American requirement applies to all manufactured goods acquired by contractors for use in ARRA-funded public buildings and public works. Yes, waivers are possible...but why take the risk and spend the time working through all the details?

Emerson has the capability to manufacture vertical motors ranging from 40 to 5,000 horsepower in our state-of-the-art facility located in Mena, Arkansas. These motors comply with the Buy American requirement of the ARRA.

Even more important, our vertical motors have a proven track record of quality and reliability, helping to keep your customer's water flowing for years to come. So specify Emerson® vertical motors made in Mena with confidence...with no waivers required!
