

The Emerson motor cross-reference tool makes it easy to identify replacement motor models. You need only to enter a unit's part number to access a replacement model number and its basic motor data. Where applicable, an alternate model is also provided.

Search

Follow these simple steps to search for a replacement model number.

1. Identify the motor's identification number off of the nameplate.
2. Enter the number in the "Cross Reference Item No.:" box. For example:
 - a. The OEM's part number (eg 68J9701)
 - b. The Manufacturer Model number (eg 5KCP39EGP871 or F48J02C13)
 - c. For Emerson models in the format K055HXABC-1234, you can just enter the final sequence of three letters, a dash, and three or four numbers: ABC-1234
 - d. Stock Replacement/Catalog Motor Number (eg 3729, D908 or FSE1036S)
3. Click the Search button or Enter on your keyboard.

You can repeat these steps as needed to query for additional models.

Catalogs

Links to PDF copies of our standard catalog price pages are provided for your convenience at the bottom of the cross-reference window.

Updates

As we introduce new ratings to our product lines, you will have the opportunity to download and install additional cross-reference data and catalog pages. Visit <http://www.emersonmotors.com/motorxref.htm> for information on these updates.

Troubleshooting

If the application displays any of these messages, please install the MDAC (Microsoft Data Access Components) from the CD. (MDAC_TYP.EXE)

- Provider cannot be found. It may not be properly installed.
- Method '~' of object '~' failed
